

Andy Intro - Listen to who has been right and who has told the truth.

A variety of sources worth listening to are now putting out a very dire message:

Paul Singer Elliott Management recent report. The world economy faces an “extremely challenging” outlook and hyperinflation could result in “global societal collapse and civil or international strife”, the letter to clients said, the Financial Times reported. Elliott believes that investors should brace for a “a seriously adverse unwind of the everything bubble” because of the number of “frightening and seriously negative possibilities”.

Bill Holter Financial Analyst loaf of bread example.

“The real economy runs on credit. Everything you look at, everything you touch and everything you do every day has many uses of credit to get to the final product or situation. So, once credit freezes up, it’s completely game over. In a past interview, I said they are pulling the plug. They have to pull the plug because, mathematically, the debt cannot be paid. The derivatives cannot perform. So, they have to pull the plug. They also have to do one other thing, and that is they have to kick the table over. What will the false flag event be? I have no idea. . . . They have to kick the table over so they can say our policies were working, but whatever this event will be stopped them.”

Bob Moriarty PM Expert 321Gold “We’re going to have more changes in the next six months to a year than we have seen in the last 20-30 years maybe 50. There’s going to be some very bad things coming. It is not a good time to borrow money, to have debt. Its a good time to pull in your horns and be careful. Take care of your family and your city.”

Michael Yon - War Correspondent 1 Notes:

Energy is the “Kill shot” - Natural gas is needed for the Haber-Bosch process to make ammonia based fertilizer. It feeds 4 billion people. NH<sub>3</sub> ammonia the H comes from natural gas. Germany is in deep trouble with shortfall in natural gas. 26 plants in Europe - all or partially shut down now. A lot of inputs to ag are de-industrializing including spare parts, diesel additives, more. Famine is a serious risk. Read books on famine. Patterns: Pandemic - Famine - War - triangle. Human osmotic pressure. HOP One follows the other. It is a systematic attack. Conditions are being set for the most extreme famine in human history. Based on history famine may take two years to develop but then may last for up to 10 years. Pandemic follows famine, because of malnutrition. Typhus cholera, TB etc. HOP spreads disease. Hunger can create famine, via stealing then farmers stop growing, govt takes from farmers, distribute and

production is inhibited, then big famine and migration. Govt imposes Price controls, rationing, anti-hoarding/robbing from farmers and people, and it always doesn't work. A lot of fires in food production facilities maybe because people are stealing and covering up.

### **New payment system coming into place middle of 2023.**

Said in the context of the Economist article on a 4% inflation target for monetary policy coming up – “a semi-official spokesperson for the Powers That Be” – and “Federal Reserve Board finalizes updates to Board’s rule concerning debit card transactions” effective July 1, 2023:

“What I would say is this: If you’re a group of local farmers and local business people in a community, you have until July 1, 2023 to come up with a community currency or a community barter system or something, or else you run the risk you’re going to be toast.” CAF, Money & Markets 10-13-22, min. 42:42 (Starts at 39:41)

What to do about it? We have some ideas and are open to input.

First ask Sandy to present Exchange Board.

Mike Antonelli: The garden concept was briefly mentioned but caught my attention. It seems that the Food Forest Abundance Corp has a more detailed plan on this topic. I signed up for Brian Winkelman to contact me. I plan on finding out more about this.

They have wonderful ideas and it checks off a lot of our needs in a crisis. They are looking to build a learning center for the community that will also be a working farm. One could invest (money) into this concept. If individuals do not have cash to invest they can participate with their labor. In a crisis this can be a source of food as well as a gathering spot. If we were behind this idea, I venture we could find a local farmer to get involved and potentially use a portion of their land. This effort would benefit from being more structured such as a corporation or as a coop. We would put together a mission statement with clearly defined values that could explain our purpose. Just an idea, but Pastor Corey Brooks had an idea to build a community center in the bad neighborhood in Chicago. This weekend he broke ground on a twenty million dollar center being built from donated money that he raised.

Community Based Currency - Thomas H. Greco - Show Book.

One thing that seems to be pretty universal in the alt currency systems I'm reading and hearing about (also in the YouTube cartoon) is the idea that (trusted, reliable) producers must be the issuers of any local currency. Local/Community currency can only be based on relationships CAF 3Q Wrap Up Part 2.
